Objectives of the module required to obtain learning effects:	The veterinary profession is linked to public health protection. As part of public safety, public health is exposed to many risks. The consequence of these risks can be loss of health and life among humans and animals, as well as loss of property and damage to the environment. Multidisciplinary teams are required to prepare, prevent, respond and recover. During the course, students will gain knowledge about different types of threats to public health of a natural and intentional nature, about methods of responding in the presence of threats, preparing for the occurrence of threats, preventing threats and recovery after the occurrence of threats. In addition, the course participants will become familiar with the basic administrative structure involved in the implementation of public safety tasks.	
Assessment methods:	Assessment of students work cards, written test
